SHUBHAM SHARMA

Senior DevOps & DevSecOps Engineer · Platform Engineering & Cloud Infrastructure Consultant

Pune, Maharashtra, India · +91-9584830691 · shubhs248@gmail.com · shubhs248.github.io · linkedin.com/in/shubhs248 · github.com/shubhs248

PROFESSIONAL SUMMARY

Senior DevOps, DevSecOps & Platform Engineer with **7+ years of experience** architecting, automating, and securing cloud-native infrastructure across enterprise and telecommunications environments. Expert in designing self-healing CI/CD & GitOps pipelines, managing production Kubernetes (K8s, EKS, AKS) clusters, codifying multi-cloud Infrastructure as Code (Terraform, Ansible) across AWS and Azure, and embedding shift-left security guardrails. Proven track record supporting 60+ enterprise microservices, cutting environment provisioning time by 60%, reducing MTTD/MTTR by up to 70%, decreasing reported security vulnerabilities by 40%, and driving 34% higher developer velocity through AI-augmented DevOps workflows.

TECHNICAL COMPETENCIES & CORE STACK

Cloud & Orchestration: Kubernetes (K8s, AWS EKS, Azure AKS), Red Hat OpenShift, Docker, Helm Charts, AWS (EC2, ECS, Lambda, S3, VPC, IAM, CloudWatch), Microsoft Azure

CI/CD & GitOps Delivery: Jenkins (Pipeline-as-Code, Declarative & Shared Libraries), GitLab CI/CD (GitLab Runners), GitHub Actions, ArgoCD (GitOps), Azure DevOps

DevSecOps & Shift-Left: SAST, DAST, SCA, SonarQube, Trivy, GitHub Advanced Security (GHAS), Checkov, tfsec, Open Policy Agent (OPA), HashiCorp Vault, AWS Secrets Manager, Black Duck, Burp Suite, OWASP ZAP, CycloneDX SBOM

IaC & Configuration Mgmt: Terraform (Modular IaC, Remote State Management), Ansible (Playbooks & Roles), AWS CloudFormation

Observability & SRE: Prometheus, Grafana, Datadog, OpenSearch, ELK Stack, Splunk, Alertmanager, ServiceNow (ITSM/ITIL), Root-Cause Analysis (RCA), SLA/SLO/SLI, MTTD/MTTR Optimization, Disaster Recovery (DR)

Languages & Artifact Tooling: Python, Bash / Shell Scripting, Groovy, YAML, Linux/Unix Administration (RHEL), Git, JFrog Artifactory, Sonatype Nexus, FastAPI, PostgreSQL, Redis

AI & Developer Enablement: GitHub Copilot, GitLab Duo, Microsoft 365 Copilot, Model Context Protocol (MCP), Local LLM/RAG (Ollama, Chroma), Cursor AI

PROFESSIONAL EXPERIENCE

Senior Consultant – DevSecOps & Cloud Architecture — Infosys

Aug 2026 – Present

Pune, India · Driving cloud-native delivery, DevSecOps automation, and CI/CD architectural modernization for enterprise transformation initiatives.

- **End-to-End CI/CD & GitOps Architecture:** Design and own automated build, release, and continuous testing (CI/CD/CT) workflows using Jenkins (Pipeline-as-Code), GitLab CI/CD (GitLab Runners), GitHub Actions, Azure DevOps, and ArgoCD, standardizing release gates across multi-environment cloud workloads.
- **DevSecOps & Shift-Left Security:** Embed automated security and compliance-as-code directly into delivery pipelines—integrating SAST, DAST, and SCA scanning (GitHub Advanced Security, SonarQube, Trivy, Black Duck, Burp Suite), secrets management (HashiCorp Vault, AWS Secrets Manager), and IaC policy enforcement (Checkov, tfsec, OPA) with automated pull-request quality gates.
- **Multi-Environment Infrastructure as Code (IaC):** Architect reusable, modular Terraform blueprints (with remote state management), CloudFormation templates, and Ansible playbooks to provision and configure scalable infrastructure across AWS (EKS, ECS, EC2, Lambda, S3, IAM) and Microsoft Azure.
- **Container Orchestration & Observability:** Manage production Kubernetes clusters and Helm-based microservice deployments with proactive reliability engineering, leveraging Prometheus, Grafana, Datadog, and CloudWatch to enforce strict SLA compliance and minimize MTTR.
- **GenAI Enablement & Automation Tooling:** Lead Generative AI adoption across engineering squads (GitHub Copilot, GitLab Duo, M365 Copilot) to accelerate feature velocity by 34%, while engineering custom Python and Bash utilities to eliminate manual pipeline bottlenecks.

  Key Environment: AWS, Azure, Kubernetes (EKS/AKS), Terraform, Ansible, Jenkins, GitLab CI, GitHub Actions, ArgoCD, SonarQube, Trivy, Checkov, Vault, Prometheus, Grafana, Python, Bash.

DevOps Engineer (Advanced) / Senior DevOps Engineer — Amdocs

Jun 2024 – Aug 2026

Pune, India

- **Infrastructure as Code (IaC):** Architected and maintained modular Terraform IaC templates across cloud and hybrid environments supporting 60+ enterprise managed services, cutting new environment provisioning time by 60% and eliminating configuration drift.
- **CI/CD Modernization:** Engineered and optimized 35+ multi-stage Jenkins (Declarative & Shared Libraries) and Git-based CI/CD pipelines for containerized microservices, reducing deployment lead times from 2+ hours to under 15 minutes.
- **Kubernetes & High Availability:** Managed multi-region production Kubernetes (K8s) and OpenShift clusters using Docker and Helm, executing rolling upgrades, autoscaling, and disaster-recovery (DR) replication simulations to maintain a 99.98% platform reliability SLA.
- **Full-Stack Observability & DevSecOps Governance:** Designed unified observability dashboards and alerting rules using Prometheus, Grafana, and OpenSearch—reducing Mean Time to Detect/Resolve (MTTD/MTTR) by 70%—while enforcing SonarQube quality gates and JFrog Artifactory / Nexus governance to cut reported vulnerabilities by 40%.
- **Operational Automation:** Built custom Python and Bash automation tooling for log triage, automated health checks, and compliance verification, saving engineering teams 12+ hours/week in manual operational toil.

DevOps Engineer (Experienced) — Amdocs
Jan 2022 – Jun 2024

Pune, India

- **Pipeline Automation:** Automated build, test, and deployment workflows using Jenkins, Git, and Docker, transitioning 20+ legacy telecom release processes into standardized continuous delivery pipelines and cutting manual release overhead by 45%.
- **Application Containerization:** Collaborated across development, QA, and release operations teams to containerize enterprise applications and standardize lower-environment promotions across Dev, SIT, and UAT.
- **Incident & Runbook Automation:** Owned production incident response, blameless root-cause analysis (RCA), and runbook automation using Bash/Shell and Python scripting, reducing recurring operational tickets by 30%.

  Key Environment: Kubernetes, OpenShift, Docker, Helm, Terraform, Jenkins Shared Libraries, Prometheus, Grafana, OpenSearch, SonarQube, Nexus, Python, Bash, Linux (RHEL).

Associate (DevOps & Cloud Operations) — Cognizant
Jun 2021 – Jan 2022

Pune, India

- **CI/CD & Infrastructure Operations:** Automated Jenkins CI/CD deployment workflows—reducing manual deployment overhead by 60%—while managing and monitoring 150+ enterprise Linux and cloud-hosted servers at 99.9% uptime.
- **AIOps & ITSM Integration:** Integrated Splunk log monitoring and alerting with ServiceNow incident management workflows to automate ticket creation, triage, and routing, cutting manual ticket handling by 35%.
- **Operational Scripting & Toil Reduction:** Authored automated Python and Bash maintenance scripts for log rotation, patch management, and health checks, saving 8+ hours weekly and improving incident resolution time by 40%.
- **Problem Management & RCA:** Led deep-dive root-cause analysis (RCA) for high-priority (P1/P2) production incidents and implemented permanent corrective actions that decreased repeat outages by 25%.
- **Release Coordination:** Partnered with application and infrastructure squads to streamline ITIL change management, release validation, and pre-deployment readiness gates.

Programmer Analyst — Cognizant
Nov 2019 – Jun 2021

Pune, India

- **Linux Systems Administration:** Administered Red Hat Enterprise Linux (RHEL) and Unix server environments, handling user provisioning, file system management, performance tuning, and L2/L3 production support.
- **ITSM & Early Automation:** Managed end-to-end ITSM incident, problem, and change lifecycles via ServiceNow while developing foundational Shell scripts to automate system health checks and daily operational reporting.

  Key Environment: Red Hat Enterprise Linux (RHEL), Unix, Jenkins, Splunk, ServiceNow (ITSM/ITIL), Python, Bash/Shell Scripting, Git.

FEATURED ENGINEERING PROJECTS & INTERNAL TOOLING

Real-Time Operations & Platform Visibility Dashboard — **FastAPI · PostgreSQL · Redis · Kubernetes · Docker · Chart.js · MCP**

Engineered a unified single-pane-of-glass platform operations dashboard providing real-time Kubernetes pod health analytics, Model Context Protocol (MCP) microservice metrics, caching via Redis/PostgreSQL, and rate-aware alerting with zero-credential demo mode. Repository: github.com/shubhs248/Operations-Dashboard

DevOps LearningHub & LabSensei (AI DevOps Tutor) — **Kubernetes · Terraform · Docker · Ollama · ChromaDB · Streamlit · Local RAG**

Architected a 12-lab enterprise practice suite spanning Linux, Docker, Kubernetes, and Terraform, paired with LabSensei—an offline AI tutor leveraging local LLM RAG (Ollama, Chroma) and SM-2 spaced repetition algorithms for DevOps upskilling. Repository: github.com/shubhs248/DevOps-LearningHub

CERTIFICATIONS

Microsoft Certified: Azure Developer Associate (AZ-204) — Microsoft — **Verified**

AWS Certified Cloud Practitioner (CLF-C02) — Amazon Web Services (Credly Verified) — **May 2024 – May 2027**

Microsoft Certified: Azure Fundamentals (AZ-900) — Microsoft (Credly Verified) — **Verified**

EDUCATION

Post Graduate Program in Cloud Computing (PGPCC) — Great Learning — **2024 – 2025**

Bachelor of Engineering (B.E.) in Electronics & Communication Engineering — RGPV — **2014 – 2018**
